Profile

Born in Lagos, Nigeria, Niyi has always had a passion for art since 6. He kept this zeal on hold for a while, until 2017 when he decided to go into graphic/digital arts. He finished at UPEI with a B.Sc in Sustainable Design Engineering, which developed his skill in taking a sustainable approach and creating environmental-friendly solutions for clients. Over the past years, Niyi has been involved in project management and execution, creating community-driven events. He also helps brands develop their identities by providing design services and advice based on his experience in creating logos, style guides, startup branding kits, design libraries, social media assets, conceptual and modern art. He is open to working with upcoming and established companies to help provide design and sustainable solutions as well as help achieve their goals.

Education

University of Prince Edward Island: Charlottetown, PE – B.Sc. Design Engineering, 2020

Selected Client Work

Creative Director, ZeroResistance; Charlottetown, PE – 2019 - Present

I develop project and case studies about the brand's goals and objectives by brainstorming, planning and executing the idea from start to finish. I work alongside different creatives to develop creative story writing concepts for art exhibitions and events. I manage daily details of projects, including schedule, budget, scope and risk, and facilitate project meetings with team members and partners. I work alongside the art director to create social media assets, Facebook ads and marketing tools, i.e. websites and editorials, to promote ongoing and future projects. I oversee all forms of idea/project expressions through various media like photoshoots, videography and poetry. Refer to website - www.zeroresistance.co

Graphic Designer, UPEI Student Union; Charlottetown, PE – January 2020 - May 2020

I was tasked with designing flyers and posters for upcoming events for the Student Union. I worked alongside the event manager to create assets needed for the annual student elections.

Design Engineer, UPEI: MDS Technologies; Charlottetown, PE – Sept. 2019 - Apr. 2020

I developed sustainable ideas and created concepts to solve the problem present in MDS Coating Technologies by conducting extensive research on current solutions and alternative answers with a team of 4. I took charge of the project's visual design segment by overseeing

all visual deliverables (Ideation Sketches, CAD, FEA Analysis, Assembly Drawing) needed to communicate the design team's proposed solution further to our supervisors and client.

Design Engineer, UPEI: Canadian Tire; Bolton, Ontario – Sept. 2018 - Apr. 2019

I created ideas and designed concepts to solve problems present in the Canadian Tire distribution centre at Bolton, Ontario with a team of 5. I completed CAD models for the team's proposed solution, technical documentation, research on recent solutions to current problems, and worked on my team management skill by organizing client meetings and public presentations.
